Combine & Refine

Overseas arrivals + departures will show why there are differences between pre and post COVID tourism numbers, so they will go next to each other

Could be similar relationship between visitor demographics and reasons for travel

2019

2024

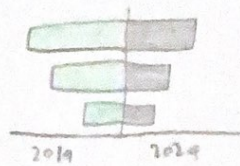

Summarise and question

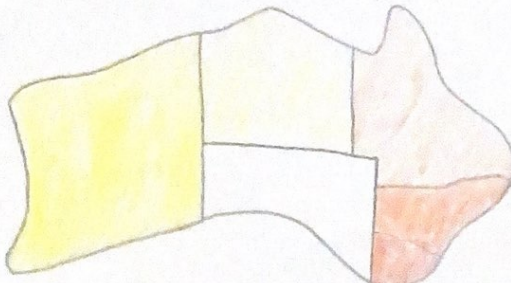

Client is interested in factors affecting tourism numbers, lots of which are being shown in all the graphs above.

TITLE

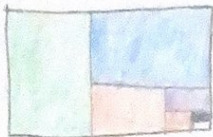

Overseas arr. + dep. Pre vs post COVID tourism numbers

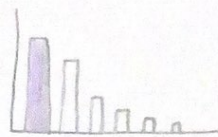

Top tourist destinations

Visitor demographics

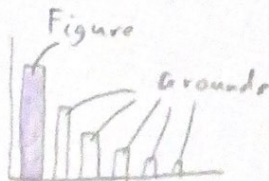

Reasons for travel

Part / Focus

- Top tourist destinations map and chart title will be larger than their counterparts
↳ Visual centre
- Overseas arrivals and departures, and pre vs post COVID tourism numbers must be next to each other. Likewise with visitor demographics and reasons for travel
- Reasons for travel bar chart has most popular reason highlighted, while the rest will be grey - differentiating between figure and ground

Title Map in the Middle

Description

Puts enlarged map in centre with other charts surrounding it

Components / Operations

- Each state/territory on the map will display the number of tourists, which will be displayed using data classification with colour saturation
- Interesting trends (such as a sudden drop in tourist arrivals and departures) will be identified and explained using annotations

Pro & Cons

Pros:

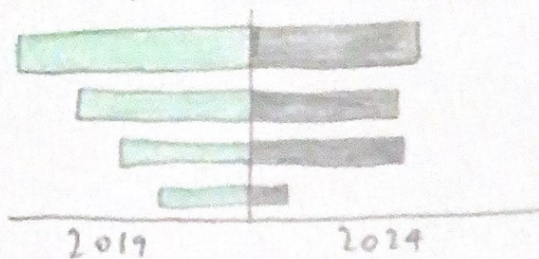

- Map is required for this data visualisation, which is the main focal point
- Related charts are placed adjacent to each other

Cons:

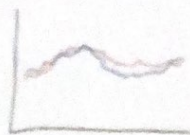

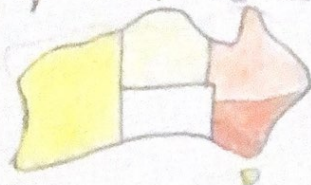

- Reader may view charts not in intended order (map may not be seen before charts above it)
- Highlighted chart does not show a factor that affects tourism numbers.

TITLE

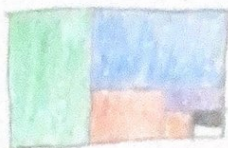

Pre vs post COVID tourism numbers

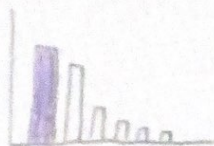

Top tourist destinations Overseas arr. + dep.

Visitor demographics

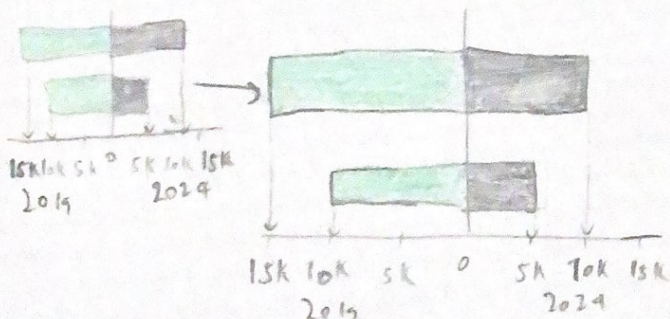

Reasons for travel

Part / Focus

- Pre vs post COVID tourism numbers is placed at the top so the reader will see it first - Visual centre
- Map is made smaller since it does not compromise readability too much
- Larger pre vs post COVID tourism numbers graph allows for wider gap between axis values, leading to increased readability

Title COVID Effect Focus

Description

Places COVID chart at the top, with the other charts below it

Components / Operations

- Pre vs post COVID tourism numbers graph uses green for 2019 data, indicating a time before COVID where people were not afraid of travelling and catching the virus.
- 2024 data for same graph uses grey to emphasise the decrease in tourist numbers after COVID - will be annotated on overseas arrivals + departures line chart

Pro & Cons

Pros:

- Highlights important chart for visualisation's purpose
- First chart the reader sees will be the largest and most significant - good first impression

Cons:

- Enlarging diverging bar chart may be unnecessary
- Focusing on COVID-related chart may be disallowed according to design specifications.

Top tourist destinations

IMAGE

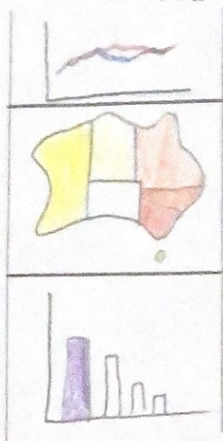

IMAGE

Reasons for travel

Part / Focus

- Having visitor demographic first (who), followed by overseas arrivals + departures (how many) and pre vs post COVID tourism numbers (what) could be a better logical flow of order for the reader
- Three middle graphs will be positioned in a vertical line to give the visualisation a more structured look

Title Telling a Story

Description

Places charts in a way that enhances story telling aspects of visualisation

Components / Operations

- Side column below visitor demographics and pre vs post COVID tourism numbers charts can contain images relating to tourism, which aims to draw the reader's attention and make the visualisation aesthetically pleasing.
- Annotations can flow from chart to chart, where one chart's annotation can be related to the previous chart's annotation, creating one large story line for the entire visualisation.

Pro & Cons

Pros:

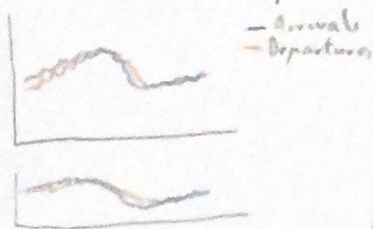

- Logical order of charts increases story telling capabilities of visualisation
- There can be multiple large charts as opposed to just one.

Cons:

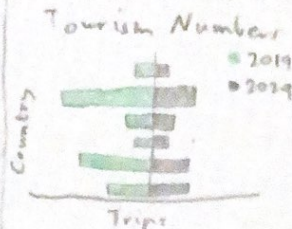

- Lots of white space in bottom left and bottom right corners - Filling it up would reduce data-ink ratio
- Top three graphs are shrunk down further - decreased readability

TOURISM IN AUSTRALIA

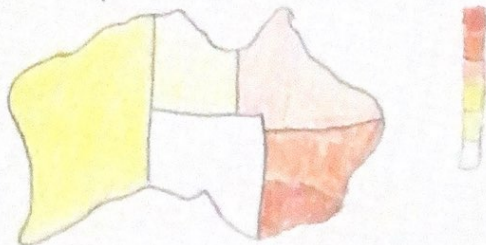

Australia Arrivals + Departures

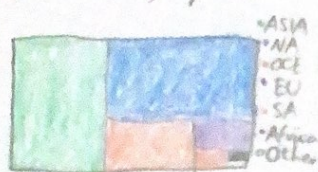

Pre vs Post COVID Tourism Numbers

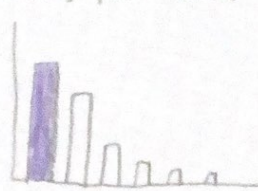

Top Tourist Destination

Visitor Demographics

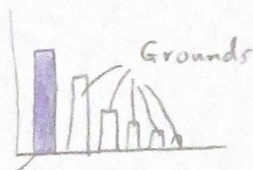

Reasons for Travel

Part / Focus

- Some graphs will have annotations, and most graphs will be presented with paragraphs explaining key features of the chart.

Reasons for Travel

Figure

- Map is larger than other charts - enhances visual centre of visualisation

Sheet 5

Name Jack Bartolin

Date 17/9/24

Title Map in the middle

Description

Put enlarged map in the centre with other charts surrounding it.

Components / Operations

- Each state/territory on the map will display the number of tourists, which will be normalised per 1000 population and shown using data classification with colour saturation.
- The title "TOURISM IN AUSTRALIA" will have a display typeface, and chart boxes will be spaced appropriately to make the visualisation more aesthetically pleasing.

Détails

- The visualisation will be created using Vega-Lite, which involves using JSON, HTML and CSS files. All data must be compatible with these platforms.
- Estimated time of completion: 3 weeks
- Estimated cost: \$0 (Vega-Lite and all necessary Visual Studio Code extensions are free to use)
- Materials required: Laptop, Github account.
